THURSDAY, FEB. 13, 1873. Farming Department.

"FARMERS" SOCIAL" A number of persons interested in Agriculture met at the residence of Isaac Hereter, Esq., in Highland township, on Saturday week, with a view to organizing in a social way for discussion of farm matters. The company was most kindly received, and after warming and partaking of an excellent din-ner, took a look at Mr. Hereter's stable of fat cattle and stock generally. Returning to the parlor, Mr. T. T. Norris ing, Esq., appointed Secretary-followed by the adoption of a resolution, that, entitivation of the social and practical of milk. Chop the suct finely; mix with the object of the association being the in farm life, its title be "Farmers' Social No. 1.22 It was also ordered that a President for the day be chosen at each meeting, and H. A. Picking was asked to serve as Secretary for twelve months. The application of line to land received some little attention, but was laid aside for more thorough discussion. The question, "Had cattle freders better buy three-year olds then raise there's accupied most of the afternoon, bringhar out outnions from the whole company, Messrs, Isaac Hereter and Raphael Sheriy submitted estimates of the cost of raising young cattle, whilst Messis, T. T. Norris, Wm. Wible, H. A. Picking, John E. Pitzer, R. W. Bream and H. J. Stable asked ques-tions or expressed opinions, or both, The talk was full and free, no one hesitating to say what he thought. At the close, the general scutiment was found to favor buying cattle for feeding,

rather than raising, in this region, "The waste of open barns," came in next, and the profit of warm housing of stock fully shown. The day was very pleasantly spont,

and each and all learned something. The "Social" will meet falways by invitation, of course,) at the house of a member this week. It is intended that these meetings be kept up during the winter and spring, at intervals to suit the convenience of all, and be resumed next Autumn. The time for active farm work is not to be interfered with. A day now and then spent in this socal manner, devoted to talks over prac-tical subjects, cannot but result in ben-

efit in many ways.

Every neighborhood can have its "Farmers' Social," It is only for ten or a dolempersons simplarly interested to agree to visit each others' places as their time may perunt.

STUDY THE NATURE OF SOILS.

A knowledge of the chemical and geological sciences is of great advantage to a farmer in successfully conducting his labors; but an intelligent observer can secure a good knowledge of the nature of his soils in ten years, and know but little if any of the exact sciences, Without any knowledge of anatomy, or pulsiology, the farmer obtains, by ob-servation, a knowledge of the peculiari-ties of his animals. He learns how to feed his pigs so as to latten them most rapidly and mulliably, how to smoke phisiology, the farmer obtains, by obreceins pigs so as to introduce a constraint and profitably, how to supply nutriment to his comes as to cause a copious supply of unik, and he learns the teneground bubble of his house and immerse the burnt part in cold water, the teneground bubble of his house and the temper and habits of his horses and oven, and accordingly controls them to his advantage. Why should he not be an by observation the nature and capibilities of his fields, and be able to a creat extent to feel them so as to obtain the highest and best errop results be to sooth until the physician arrives, and to sooth until the physician arrives, the danceronam until it falls off its the temperature of the first parts with an inch in the highest and best errop results be to sooth until the physician arrives. from year to year? Any farmer, from Let the flour remain until it falls off ita certain the extent to which his differcut fields are refentive of moisture, ife must learn how well they withstand the drought or the profracted wet of flour for burns is the most infinitable summer, how different erops behave lettindy ever proposed, and the information ought to be imparted to all. The when the rain-fall is small or copious, principle of its action is that like the en the growing months.

Physically considered, some farms are grafes, it causes instant and perfect re-

not adapted to the raising of corn and perhaps some other grains. Corn with the air from the injured parts. stands drought better than almost any other cereal, but that fact affords no reason why it can be raised to advantage on loose, dry soils. Weak, puny orn can be raised in a sand bank; but such, let him not attempt to grow it. the noble grains to grow upon natural- truth of what we have stated, there is grass farms, and if kept in good tilth are the most profitable of any. Every cultivator of the soil must first become acquainted with the physical character of each parcel he has under his charge, and then he will know what crops are adapted to the several localities.

supletely changed, and with the supplying of such chemical agents as are needed, crops of every description can be raised, satisfactory and renumerative to the husbandman. Muss. State Agree cultural Report.

NEW APPLES WANTED. tate years to raising new grapes, new and the moderate passage of the air in strawberries, new pears, and other soils ward to the skin. There is one great of fruit, but why is the apple so nearly ueglected? It is the most valuable truit of the north, all its excellent qualities considered, and yet less attention is given to crossing and raising new year ricties than with fruits of much less value. Old men can remember the on the consequences which might en-Rhode Island Greening, Baldwin and Roybury Russet when they were boys; but where is the new apple that will supersede any of these? If some of our enterprising young pomologists would plant only a dezen trees of the best sorts, so that the branches would ontermangle, as in the case of Dr. Kirkland's ture to conduct the process of shedding cherry trees, a quantity of crossed seed the first set of teeth. When the second would plant a specimen nursery or orelawould plant a specimen inusery of orch-and of seedlings ten or twenty thousand in number. Cross the Haldwin with for others, which are said to be crowdthe Swaar, the Esopus Spitzburgon with ing. the Belmont, and the Rhode Island Greening with the Wagoner, and there is no doubt that among so many new sorts, there would be some that would ! combine the vigor and productiveness of one with the excellent finyor of another. A thousand trial trees might occupy an agre till the period of hearat interference with the law of dentiterest with which these new sorts would be watched as they reddened into beauty and excellence for the first time .-The most promising might be grafted into old trees, twenty sorts or more in-

Line pans with buttered paper, and hake as soon as light. Use homemode HAIL! ALL HAIL ORANGE PIE-A few good, tender, juicy oranges, skinned, cut up and placed under a crust, as one would do with apples, make a really good me.

CLOTHES ON FIRE, The following, which we copy from the Scientife American, should be re-

membered: Three persons out of four would rush right up to the burning individual and begin to paw with their bands without any defaute aira. It is useless to tell the victim to do this or that, or call for water. In fact, it is generally first not to say a word, but to selve a blanket from the bed or any westen fabric -- if none is an land, take any woolen material hold the corners as far apart as you can, stretch them out higher than your head, and running boldly to the person, make a motion of clasping in has constantly on hand a monison ment of the arms, mostly about the shoulders. Clocks, Wickes, Jewelly and SilverPlated Ware self, when a beautiful new skin can be found. Unless the bransaire deep, inother application is needed. The dry

THE PEET. Of all parts of the body, there is not one which eight to be so carefully at-tended to us the feet. Every person orn can be raised in a sand bank; but the tender to us the feet. Facery period knows from experience that colds, and many other discuses that proceed from requires a good, retentive soil, a good fine loam, in which to grow it in perfection, and if the owner of land has no that the circumstance from the same, are attributable to cold feet. The feet are such a distance from the "wheel at the circumstance from the the circumstance of the least one that the circumstance of the land of the land of the land of the same. that the circulation of the blood may such, let him not attempt to grow I. I his fields are better adapted to melons, be very easily checked in them. You beans, rye or perhaps wheat. It is use all this, and although every person beans, tye or perhaps wheat. It is use-less to attempt to force corn or any of the noble grains to grow upon naturally wet or low elay bottom lands, without thorough drainage and deep tillage. Such are better adapted to grass, and grass farms, and if kept in good tith are dev to display near feet, in the tashionable sense of the term. New this is yery wrong. In cold weather, boots of good taick leather, both in soles and b yery wrong. In cold weather, boots of good thick leather, both in soles and uppers, and large enough to give tree freelistion of the blood in the feet, gloudd be worn by all. They should be according to give the feet to wear an air-light, but not air-light covering over them. India-rubber shoes on boots should not be worn except in wet and sloshly weather, and then taken off as soon as the exposure to it is over.

No pert of the body should be allowed. adupted to the several localities.

By drainage and deep tillage, the physical condition of most lands can be completely changed and with the same junes the feel to wear an air-tight cor-No part of the body should be allowed to have a covering which entirely obstructs the passage of the carbonic aca
